**SAN DIEGO, CA – January 31, 2024** - Chiplet Summit announces [Yole Group](#) is returning as its market research partner for its second annual event. The Summit is on February 6-8 at the Santa Clara Convention Center. Yole Group will analyze the chiplet market and cover both short and long-term trends.

BULLETIN: MIT Technology Review has just named “chiplets” as one of their ten breakthrough technologies for 2024!

Analysts Tom Hackenberg and Ying-Wu Liu will present a “Market Research Update” in the leadoff plenary on “Chiplets: Where We Are Today”. Yole will also lead an expert table and discuss market trends in the closing panel.

Chiplet Summit covers the latest architectures, development platforms, and applications. It includes pre-conference seminars, keynotes, annual updates, and paper and panel sessions. It covers all aspects of chiplet development, including design, interconnect, packaging, integration, and test.

“Current market research is vital for chiplet designers,” said Chuck Sobey, Summit General Chair. “They must know which products are succeeding, how demand will change, and what customers want. Yole Group is a leader in providing critical data for industry participants. We are glad to have them add a key dimension to our event.”

“I am pleased to be back for the second Chiplet Summit,” said Tom Hackenberg, Yole Group Analyst. “Chiplets make very large chips cheaper and faster to produce. They let designers include off-the-shelf IP, proven work in older processes, and analog designs. The technology is making great strides with Intel, AMD, Google, NVIDIA, and TSMC among its early advocates.”
